EDUCATION

University of California, San Diego

Bachelor of Science in Data Science, Minors in Mathematics, Cognitive Science

Sep. 2023 - Mar. 2027

La Jolla, CA

EXPERIENCE

Narvar

Data Engineer Intern

Jul. 2026 – Sep. 2026

San Mateo, CA

- Engineered a **Python/Airflow** pipeline ingesting **Rocketlane API** transcripts and metadata into **BigQuery** with rate-limit handling, pagination, and incremental **CDC** loads across **10+** tables
- Built cohort retention analytics in **BigQuery/SQL** quantifying **GRR/NRR** across **10 vintages** and **5+** cross-cuts, surfacing churn and multi-product stickiness signals from **Salesforce** and **ChurnZero**
- Deployed a self-serve **Hex** semantic layer on **BigQuery**, cutting stakeholder SQL dependency with endorsed models and dashboards validated against **Metabase**

Talmo Lab — Salk Institute

Computer Vision Undergraduate Researcher

May. 2026 – Present

La Jolla, CA

- Trained and evaluated a **U-Net CNN** keypoint-estimation model end-to-end in **PyTorch** (sleap-nn) on an **RTX A5000 GPU**, benchmarking at **4.15 px** mean landmark error and **0.186** val mOKS
- Analyzed a U-Net receptive-field sweep (max_stride 8→64) across **7 Weights & Biases** runs, documenting a **~1.5–1.7×** accuracy spread in localization error (dist 0.99–2.08 px) and flagging a mis-calibrated **OKS** metric
- Committed the CNN reference baseline as network-free **JSON fixtures**, growing the test suite **65→84 tests** (**+29%**) so model-performance numbers are locked against silent drift in **CI**

EVgo

Data Engineer Intern

Jun. 2025 – Aug. 2025

El Segundo, CA

- Refactored legacy pipeline to **TypeScript**, automating Snowflake-to-**AWS S3** revenue reports and built an internal UI to view or generate reports on demand
- Built a **Snowflake** stored procedure, reducing manual filtering by **95%**, by flagging Tesla charging sessions and routing entries into a dedicated analysis table
- Built an **ELT** pipeline with an S3 event listener to parse incoming CSVs and load data into Snowflake tables

Triton Software Engineering

Software Developer

Dec. 2024 – Present

La Jolla, CA

- Built scalable apps for nonprofits using **React Native**, Expo, **Express.js**, **MongoDB**, and **TailwindCSS**, containerized with **Docker** and tested via **Postman**

Hemut

Software Engineering Intern

Dec. 2024 – Mar. 2025

Los Angeles, CA

- Integrated real-time **API** fuel-price data and applied the **A* algorithm** with an admissible heuristic to compute optimal trucking routes by cost and distance

Sensory Commuication Lab, UCSD

Full-Stack Undergraduate Researcher

Aug. 2024 – Jul. 2025

La Jolla, CA

- Developed an interactive Spectrogram tool using **React**, enabling real-time frequency visualization and generation
- Trained **TensorFlow** hand-pose models with **92%** accuracy in gesture recognition for webcam-based interaction
- Developed MFlow, an audio interface built with **Howler.js** and ReactFlow for processing and visualization

PROJECTS

Personal Portfolio | anirudhannabathula.com | *JavaScript, React, Three.js, TailwindCSS*

Nov. 2023 – Present

- Created a dynamic personal portfolio using **JavaScript**, React, and **Three.js** to showcase projects and skills

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL (Postgres), JavaScript, TypeScript, HTML/CSS, Lua

Frameworks: React, Node.js, Three.js, Next.js, Express.js, EmailJS, JUnit, WordPress, Material-UI, FastAPI

Developer tools: Git, Docker, Postman, Airflow, Weights & Biases, Hex, Metabase, Kubernetes, Terraform, Jenkins

Libraries: Pandas, TensorFlow, PyTorch, SLEAP, TailwindCSS, NumPy, Matplotlib, NLTK, OpenCV, scikit-learn

Cloud/Data: AWS (EC2, S3, Lambda, SageMaker), Google Cloud Platform, BigQuery, Azure, Snowflake, Salesforce

LLM/AI: Claude, ChatGPT, GitHub Copilot, Cursor, MCP, RAG, prompt engineering, AI-assisted debugging
